SUMMARY

Software Engineering student at UTFPR and contract software developer at Astrocode (Java, Spring Boot, Angular, PL/SQL), with a technical degree in systems development, looking for a remote junior back-end or full stack role. I build web and mobile applications end to end: RESTful APIs in Node.js (Express) and Java (Spring Boot) with layered architecture and JWT authentication, SQL and NoSQL databases (PostgreSQL, MySQL, MongoDB), front-ends in React, Next.js and Vue/Nuxt, and mobile apps in React Native. I care about clean code and agile practices, and I back my work with automated tests (Jest, Vitest, JUnit), Docker and CI/CD pipelines on GitHub Actions.

EXPERIENCE

Software Developer (Contract) – Astrocode, Remote | Oct 2026 – Present
Java, Spring Boot, Angular, TypeScript, PL/SQL (Oracle), Git, Claude (AI)
I build and maintain front-end (Angular) and back-end (Java, Spring Boot) features and fix bugs on a client project. I write PL/SQL against the project's Oracle database. I review and test code generated with Claude before it ships, following the team's coding standards and Git workflow.

PROJECTS

Mood Sharing – REST API and mobile app for couples | github.com/AlanDiogoR/Mood-Sharing
Node.js, Express, TypeScript, MongoDB, Mongoose, JWT, React Native, Expo, Jest
I designed and built a TypeScript back-end with 44 REST endpoints across 10 modules, covering authentication, partner linking, moods, notes, photos, media, dates, goals and workouts. I implemented JWT authentication with refresh-token rotation and revocation persisted in the database, bcrypt password hashing and input validation, and hardened the API with Helmet, rate limiting, NoSQL-injection sanitization and an origin-based CORS allowlist, ready for serverless deployment on Netlify Functions. On the client side, I created a React Native (Expo) app with geolocation-based proximity, push notifications (Expo and Firebase), biometric login and an Android widget.

Grivy – Personal finance manager (Astrocode challenge) | github.com/AlanDiogoR/Desafio-Astrocode | grivy.netlify.app
Java 21, Spring Boot, Spring Security, JPA, PostgreSQL, Flyway, Nuxt 4, Vue 3, TypeScript, JUnit, Vitest, Docker, GitHub Actions
I built a layered RESTful API secured with Spring Security, JWT and BCrypt, using JPA with Flyway migrations, login rate limiting (Bucket4j) and OpenAPI/Swagger documentation. I then developed the Nuxt 4/Vue 3 front-end (Pinia, TanStack Query) for accounts, transactions, cards and goals, tested with JUnit and Vitest and shipped through Docker and a GitHub Actions CI/CD pipeline.

CodeLeap Network – Social network (CodeLeap technical test) | code-leap-test-tau.vercel.app
React, TypeScript, Vite, Redux Toolkit, Firebase (Auth, Firestore), Tailwind CSS, Zod, Vitest
I delivered a post feed with likes, comments and @mentions, author-only editing and deletion, cursor-based infinite scroll and real-time updates through Firestore. I applied the Repository Pattern to switch between a REST API and Firestore, managed global state with Redux Toolkit, validated data with Zod, prevented XSS with DOMPurify and covered the logic with Vitest.

Verdan – Full stack e-commerce (technical course capstone) | github.com/AlanDiogoR/TCC
Next.js, React, TypeScript, Node.js, Express, MongoDB, Electron
I developed an online store with a REST API for products, categories and orders, JWT/bcrypt login and a desktop admin panel built with Electron.

IShop – Online store with Stripe payments | github.com/AlanDiogoR/IShop
Next.js 13, React, TypeScript, Stripe, API Routes, Stitches
I built a storefront using SSG/ISR and dynamic routes, with the catalog pulled from the Stripe API and a checkout API route that creates the payment session.

EDUCATION

B.S. in Software Engineering – Federal University of Technology – Paraná (UTFPR), Cornélio Procópio | 2025 – expected Jan 2029
Coursework projects in C, object-oriented Java, C++ with OpenMP/Intel TBB, SQL and data modeling (UTF-Projetos repository on GitHub).
IT Technical Course in Systems Development – Etec Terezinha Monteiro dos Santos | 2021 – 2023
Additional courses: Ignite (React, React Native, Node.js, Next.js) by Rocketseat; web development by JStack; Data Modeling and Computer Networks by Fundação Bradesco.

SKILLS

Languages: TypeScript, JavaScript, Java, SQL, C, C++, Python
Back-end: Node.js, Express, Spring Boot, Spring Security, REST APIs, JWT, Mongoose, JPA, Zod, OpenAPI/Swagger, Firebase, Stripe
Front-end & mobile: React, Next.js, Redux Toolkit, Vue 3, Nuxt, HTML5, CSS3, Tailwind CSS, Sass, React Native, Expo
Databases: PostgreSQL, MongoDB, MySQL, Flyway migrations, data modeling
Practices: OOP, SOLID, Repository Pattern, layered architecture, Clean Code, Scrum, Kanban
Testing & DevOps: Jest, Vitest, JUnit, Testing Library, Docker, GitHub Actions, Git, Linux, Vercel, Netlify, Railway

LANGUAGES

Portuguese (native) | English (upper-intermediate, B2) | Spanish (basic)
